EXECUTIVE SUMMARY

COMPANY OVERVIEW

BOOKTOR is founded in 2021 by a group of software engineering students who aimed to develop the medical industry by allowing patients to organize and handle their own medical profiles using a simple mobile application. That way patients would have their medical records safely secured, saved, and retrievable whenever needed. On the other side, patients' confidentiality, and medical profile organization and accuracy is dropped from doctor's responsibilities.

Mission

Our mission is to simplify the connection between doctors and patients, as well as create a simplified, portable, and well-organized medical profile accessible for everyone. We aim to be the main medical application for appointments reservation, and patients and spread health awareness.

Vision

To be a certified all-in-one medical and health consultant application for all patients in Egypt.

| Goal | Objectives |
|---------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1) Establish brand awareness. | <ul style="list-style-type: none"> - Spend 20,000 EGP on social media advertising in the next 2 months. - Release advertising posters in 50 clinics in next 3 months as an agreement. - Offer free delivery on medicines in the first 2 weeks. |
| 2) Increase profit margin. | <ul style="list-style-type: none"> - Increase medicine delivery price by 15% gradually in the next 6 months. - Increase the commission of appointments bookings by 10% in the next 3 months. - Add 2 advertisements slot on the application in the next month. |
| 3) Enhance customer experience. | <ul style="list-style-type: none"> - Upgrade our servers in the next 3 months to enhance performance. - Offer a free session with a consultant in the first month of launching for users. - Hire 3 consultant doctors in the next 3 months to be able to serve patients faster. |

Track Record of the Company

- Team is formulated and discussed the approach.
- Discussed the problems of the current situation in the industry and suggested several solutions to overcome the problems.
- Collected the capital fund for our startup.
- Found a suitable office location for the team to operate in.
- Agreed on the company name and started branding our idea by creating the logo and banners for our company.
- Analyzed our competitors and their strengths and weaknesses.
- Developed application prototype.

Business Ownership and Legal form

The legal form of our project is a formed partnership made between Ahmed Adel, Abdulrahman Zakaria, Ahmed Banna, and Abdullah Yasser who owns 25% of the company shares each. We believe that our partnership will provide us with more capital acquisition, and a wide range of expertise and knowledge of different aspects that will enhance our progress throughout the development of the project.

The Premises

- The company will conduct its business in a rented office in 10th of Ramadan.

PROBLEM & SOLUTION

PROBLEM DEFINITION & STATEMENT

Egyptian's health awareness and medical status are in an unpleasant situation. According to statistics, there is a huge number of Egyptians who suffer from chronic diseases that need regular medical supervision, which needs detailed medical history and profile for their illness. In Egypt, people would spend several hours waiting their turn in the hospital or doctor's clinic and spend more hours waiting for their ray illustration and/or medical analysis results. Moreover, some people fear going to doctors because they doubt their credibility, so they prefer to take medicines by themselves when feeling ill. On the other hand, elder people can't go to doctors on their own, so they ignore their illness, or they wait for their children or their relatives to schedule them a doctor appointment and drive them. Other people may have difficulty scheduling their appointments due to their busy working environment that they forget their appointment date or forget to take their medication at its scheduled times. The Egyptian people suffer from chronic diseases which are caused by bad habits due to people's lack of knowledge regarding health awareness. As a result, it could shorten their life expectancy. There are issues that people also face when buying their needed medicines due to medicines shortage that occasionally occur in some pharmacies. In addition, there are other minor common issue such as the difficulty patients face to understand the handwriting of doctors on their medical. On the other side, doctors find difficulty organizing and validating all their patient's details and profiles. Moreover, doctors that have just started up their clinic spend money and effort on advertising their clinic in attempt to get patients on daily basis.

A patient who suffers from chronic, multi-organ diseases or critical illness needs doctor's supervision and consultancy regularly. consultant and supervision needs to book different doctor appointments, in which, each doctor is in a different place and needs patient data history from other doctors to know how to deal with this patient case. Furthermore, this patient doesn't understand doctors' handwriting and most of the time he can't get for himself these required medicines because it's usually not available in pharmacies due to the high demand. Moreover, this patient book an expensive appointment just to read his analysis or X-rays. the patient most of the time finds difficulty in scheduling and remembering his medicine doses on time. The patient. the patient who does not have sufficient awareness of his illness, makes his situation worse by doing wrong habits. On the other side doctor who owns a clinic has grown to the point that it is difficult to keep track of all his patients, cannot remember their medical history, and can't schedule their upcoming appointments. A fresh-graduated Doctor who is starting his career finds difficulty in getting to his clinic patients.

OUR SOLUTION

Ascribed to all these critical problems, and obstacles how might we construct a medical application to give the user the ability to reserve his doctor appointment, so that he might feel the freedom of choice between a variety of doctors based on his needs and his specializations, moreover, how might the application give the patient the ability to view and give doctor reviews and stars, based on his own experience, and other patient's experience so that makes the doctors motivated to get as much as they can of good reviews because it affects their reputation on the application. How might the application allow the patient to make an online chat consultant, video conference, or voice call without wasting the time or forcing him to go to the clinic or hospital so that he might feel more comfortable. How might we allow the patient can create his private profile including his medical state, and data and give him the authority to hide or show what he wants so that he might feel secure. How might the system give the patient the ability in which he can send and follow up with his doctor by sending his analysis so that he might feel encouraged using our app, moreover he can send all types of ray results through the application chat. Which facilitates the doctor's supervision process on each patient, The application will have some additional important features that help the patient to be in a better health state in which we allow, for example, daily tips and advice for a better life routine, trending infections and illness symptoms details, a reminder for the appointment date, as well as the user, can access his profile, reports, and medicines in an offline mood without internet anytime so that the user feels the availability of the system. How might we allow users to order all their pharmacy needs through the application, and in addition, that the users can get quick and more detailed symptoms by reserving a diagnostic doctor. How might we allow doctors to sponsor their profile to be more discovered through the application, and they will be able to customize their advertisement based on their target audience on the application. User data and chats will always be an end to end encrypted and only be accessed by patient biometrics or mobile passcode.

PRODUCT OR SERVICE OFFERINGS

PRODUCTS OR SERVICES DESCRIPTION

Finding the appropriate doctor based on your medical conditions could be difficult and confusing sometimes. Moreover, keeping track of medical documents such as test results, rays, and medicine times could be a struggle. On the doctor's side, to store a fully accurate and complete medical profile for hundreds or thousands of patients could be a difficult process as it consumes time and effort. Moreover, ensuring a safe storage of patient's data is the clinics' responsibility, which makes the data subject to risk since it could be manipulated, leaked, or lost which does not only put the patient in a harmful situation, but the clinic as well. Furthermore, the mentioned concerns harms patients by possibly leading to wrong diagnoses, and medical prescriptions to conflict with each other which could lead to deterioration in the condition of the patients. We believe that safe and simple health cases gets worse due to the unavailability of an easy, accessible, portable, and organized platform to access and store a medical profile. Other applications only allow booking appointments without saving and registering what actually happens in the appointment. Thus, we made an approach towards developing the medical industry as it is a necessity. We are introducing BOOKTOR, a mobile application that solves the mentioned problems by allowing patients to safely store and access their medical record anytime and anywhere. As illustrated in Figure 1, patients can book an appointment by applying filters on a list of doctors to find the most appropriate doctor based on the patient's need and diagnosis.

If a patient does not know which doctor is appropriate for his/her conditions, he/she can mention the symptoms to a consultant in an online chat session, and the consultant will be able to suggest them a list of doctors that can help in their case. (Shown in Figure 2)

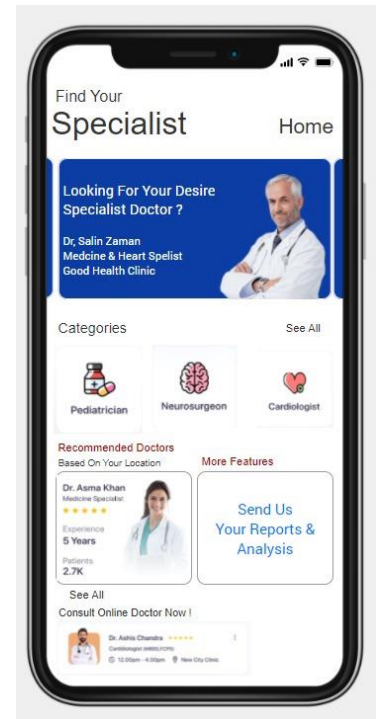

Figure 1: Doctor Reservation

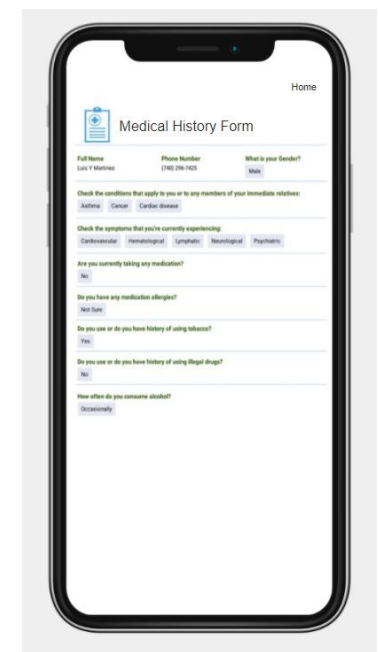

Figure 2: Submit your symptoms to a consultant

In the appointments, if the doctor schedules a medical analysis or rays to be made for a patient, then the patient can upload the result of the analysis and/or rays will be saved on his/her medical profile (Illustrated in Figure 3). Later whenever that patient attends a medical appointment whether it is with the same doctor or another, the patient can grant the doctor access to his/her medical records to help the doctor in the diagnosis. Moreover, the doctor can add the medical prescription of the patient on his/her profile to make it easier to read and to be safely stored. The patient will be able to order their medicines from their nearest pharmacy through the application. The medication schedules mentioned in the medical prescription will be used to send the patient a notification reminder to take his/her exact dose of the specified medicine/s. Finally, in attempt to spread health awareness to the public, the application will include health advises and tips for all of its users.

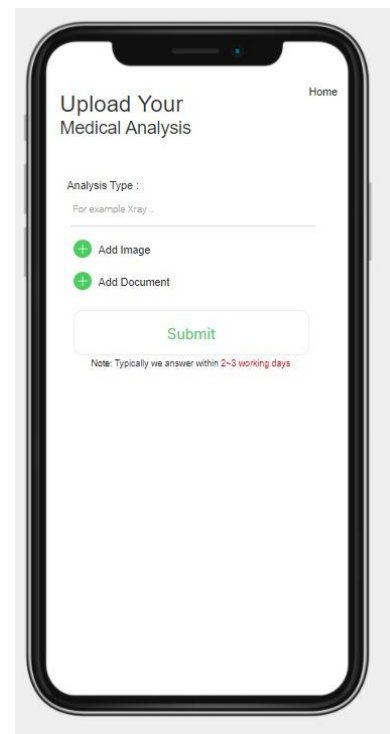

Figure 3: Add medical record to your profile

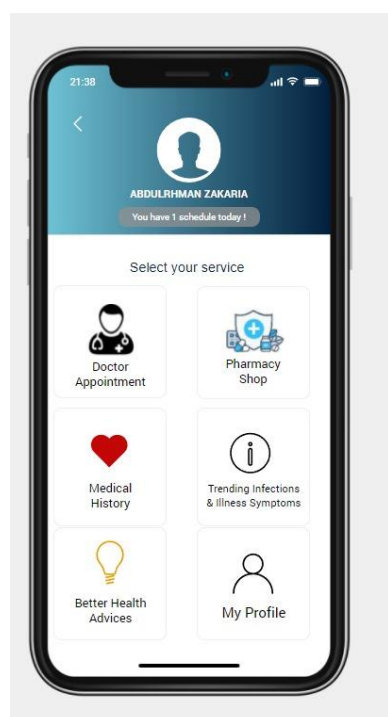

Figure 4: An overview of the patient medical profile

FEATURES & BENEFITS

| Feature | Benefit |
|------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Patients can have an online chat with doctors. | <ul style="list-style-type: none"> - It will allow patients to save time and effort in keeping up with doctors regarding their medical condition. - It will increase the total number of medical appointments made and thus increase doctors' publicity and income. - It will promote social distancing and help patients that needs to remain in home isolation to contact their doctor. |
| Patients can rate and review doctors that they have had an appointment with. | <ul style="list-style-type: none"> - Gives the opportunity for other patients to choose a highly rated doctor and further read the reviews to have a clue about the main concerns or advantages that other patients have experienced with this doctor. - Helps doctors to realize the concerns of his/her patients and work on improving it. - Allows patients to sort doctors based on their rating when looking for a doctor. |
| Doctors can be granted access by their patients to view and add data to their medical profile. | <ul style="list-style-type: none"> - Facilitates the process of conducting diagnosis as doctors will be able to view the previous medical analysis and rays with their exact date. - Promotes digitalization and safe storing of data, as doctors will be able to add the diagnosis, medical prescription, and medical analysis to the patient profile, and thus the patient will not have to carry and store medical papers. - Saves time and effort for doctors as they will not have to store and go through hundreds or thousands of medical profiles for patients. |
| The application interface is user-friendly and simple to use. | <ul style="list-style-type: none"> - Allows the elderly that does not have much experience with mobile applications to have easier time using our application. - Provides comfortable experience for patients and doctors using the application. |

| <p>Unique Services: The company provides essential features that does not exist in other competitors such as providing a medical profile for each patient within the application.</p> <p>Excellent Brand Name: It describes specifically the main service the company provides.</p> <p>Low Price: The service price is lower than the competitors which might attract the consumer.</p> | <p>Lack of Reputation: the company do not have the reputation it deserves.</p> <p>Marketing: all the four founders and marketing team do not have solid marketing background</p> <p>Lack of Liquidity: The business does not have enough funds from investors</p> |
| Opportunities | Threats |
| <p>Market Growth: The target audience started to acknowledge the powers behind the service provided by this type of companies.</p> <p>New Location: The expansion to all the MENA regions might accomplish a great success for the company.</p> <p>Services Expansion: Creating an online pharmacy with delivery system might be a great idea.</p> | <p>Market Dominance: Other companies are already dominating the market.</p> <p>Clinic: Clinics might start to create their own reservation service.</p> |

Vezeeta SWOT ANALYSIS

| Strengths | Weaknesses |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p>Great capital: The companies acquire a great set of investors that funds the business with millions (Vezeeta accomplished 40 million of funds from investors in 2020).</p> <p>Marketing plan: The company have the best and most dominant market plan in this filed as it is the most common medical app in Egypt.</p> <p>Location's availability: The company has a location variety as it has four different locations across the MENA region.</p> | <p>Interface: Vezeeta's interface is very complicated and not user friendly to the targeted audience.</p> <p>Customer service: Patients have complained about the bad quality of Vezeeta customer service.</p> |
| Opportunities | Threats |
| <p>Market growth: The target audience started to acknowledge the powers behind the service provided by this kind of companies.</p> <p>The development of artificial intelligence: The company could use AI to provide unique services like human-less symptoms classification system.</p> | <p>Market competition: A lot of startups MedTech companies started to compete in the market.</p> <p>Clinic: Clinics might start to create their own reservation service.</p> <p>Loyalty: Most of the service consumer are not loyal to the company as they might switch or not use the service again.</p> |

MARKETING PLAN

Marketing Objectives

Our main brand's defined goals are first, the company's reputation is critical as we care about the user's data privacy and protect his identity and his information. Service accuracy is also included under the application reputation, by providing efficient functions without risking user's money or not applying his actions in the right way, to avoid these risks and maximize our reputation we make sure that the data is continually refreshed, we use biometrics to make sure of the user identity, in addition, we verify our partners (doctors, hospitals, and pharmacies) with different methods, and give the authority for the user to give them reviews based on his own experience. Company reputation is crucial as it gives the user confidence to use our services, avoid security gaps and give the up-to-date risk assessment option to the client. Secondly, customer Lifetime value is considered, as the company profit growth is mainly based on expanding the networks and relations by customer lifetime value the customer will keep using the company's services, which is costs less than acquiring new ones, and the old customers if they are satisfied with the services and products, they will recommend it to everyone. The company gives special discounts, and offers to the loyal patients, and gives all the users fast and upstanding technical support which makes them feels always special. Finally, the customer acquisition as the company takes serious actions to reach new customers and convince them to buy products or services, by doing giveaways, creating high-quality services, running motivational referral programs, and defining the Target audience.

Branding Strategy

Brand Logo

A brand logo is a Typography simple design that makes It recognizable, attracts the readers, reflects professionalism, and makes the message easy to be delivered. As the background color is dark blue which emotionally reflects the calmness and gives the user the feeling of trust and security, while the first part of the word "Book" is written in white color which reflects peacefulness as a result of what the patient will achieve after booking and using our services, Moreover, the orange color in the second part of the word "TOR" psychologically used because it is highly stimulating but friendly as it is considered as attention-grabbing color.

Brand Name

BOOKTOR is a combination between two familiar words in English which is easy to recognize and simple to pronounce. BOOKTOR is a combination between the verb Booking which means reservation, which is the main idea of our company, and doctor, which refers to booking a doctor appointment. Thus, the combination of the two words if we put them beside each other, it will be Book Doctor, which is understandable, easy to recall, and relevant to the company idea.

Brand identity:

Our brand identity is about being peaceful, reliable, stylish by simple and modern designs and logo, and trust worthy which is reflected in the colors chosen for the logo, the application, website theme, and the added security features to the app. This helps to build loyalty from the customers towards the company.

Brand experience:

We strive to offer our customers their medical consultant with the highest accuracy, the lowest possible prices, and give them correct health advice, giving them the option to choose their appointment method from physical, audio, or video chat appointment.

Brand personality:

BOOKTOR is about liberty in which any patient can choose through thousands of doctors freely, aspiration power to the people through technology to have better lifestyle and confidence which is given to the patients by sharing their reports or adding their sensitive medical data.

Promotional strategy:

Our company will use paid advertising on social media platforms which will be consisting of our designed banners and a URL that redirects to our website. Initially, we will setup our advertising campaigns on social media to appear only to users that are inside Egypt as that is the only location that we will be able to provide services to. As a start, we intend to display our advertising on social media two days per week as it will be sufficient to grab customer's attention without overspending from the allocated budget. We specified 116,900 EGP of our startup capital fund for marketing. We also intend to add to our agreement with clinics to add our banner at the entry of the clinic refer patients to use our mobile application.

Place:

Our company plans to provide our services through the internet over our developed mobile application that will be released on Play Store and the APP Store, and an online website.

Pricing:

After calculating our firm's total cost and adding our target profit margin after determining our target market, we conclude the following:

Our firm's total costs = 784,600 EGP

The target market are middle and high-income customers and based on the high demand of such service as it is a necessity, so we decided to add 20% as target profit margin, since there are bank saving accounts that offer 10% fixed profit on investment, therefore 20% will be sufficient as a return percentage on our investment to cover the possible risks. Moreover, the average reservation price on our competitor's platform is 250 EGP, so our price is still within the competition. So, to have a return of 20% on our paid firm's total costs of 784,600 EGP, we should make sales of $784,600 \times 1.2 = 941,520$ EGP. Then we identified our expected average number of yearly reservations in first year which is 3766 reservations. As a result, we can calculate the average reservation price of a clinic to include our added 20% profit as follows:

Average clinic price = (firm's total costs + markup percentage) / expected average number of yearly reservations

Average clinic reservation price = $941520 / 3766 = 250$ EGP

OPERATIONS PLAN

- The CTO will gather the developers and technicians into a meeting, to collect information and data to be able to begin the development life cycle.
- Then the technicians will be divided into teams with a leader, as each team will have set of tasks to perform.
- The leader of each group will distribute the tasks for each technician.
- Get the doctor data from them to be added to the system.
- A prototype will be designed.
- Surveys and questioners on campaigns will be made for the application.
- The technician teams will meet to analyze the questioners and get the user experience. Therefore, add up or modify features to the application.
- Announce the application on apple store and google play.
- Gather feedbacks and reports about the user interactions with the application.
- In addition to the feedbacks form the doctors in the system and how they the application may help him/her more.

FUTURE PLAN

- Search for national investors as first step will be the banks.
Why: We need to step into wider perspective, to get into the middle east market. Moreover, increase our team capacity and the working station. The banks specifically will be better than the local investors as they are safer and cheaper interests.
When: If we get successful business 2 years in the Egypt with promising income.
How: we will introduce our promising incomes and how we will be able to grow and get more income for the investor.
- After the investments we can increase the marketing team and the technicians that will introduce new strategies that can increase our income and become the leading company in Egypt then in Middle East.
- We need to grow the service by including more doctors and pharmacies in our system. Furthermore, we need to be the leading company that have all the doctors and pharmacies as possible to widen our services for patent. More service and facilities, more patents, so growth.
- We need to introduce new service that will connect the patents with hospitals for emergency call and booking a room for services.

- After we successfully become the leading company in Egypt in our field, we need to step into middle east companies. Country by country, but we hopefully need to step in United Arab Emirates. As, they are the leading country in middle east which companies wish to be in their markets.

OVERALL SCHEDULE

RISKS

| Risk | Probability | Mitigation plan |
|----------------------------------------------------------------|-------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| New competitor with same services. | Medium | <ul style="list-style-type: none"> • As we have the base architecture of the system, so we have the secrete to manage our services and how to improve it. • Introduce the loyalty program that maintain the loyalty of doctors and pharmacies. • Lowering the fees taken form the pharmacies and doctors. |
| Technical Issue as patents data may get leaked. | High | <ul style="list-style-type: none"> • Frequently test the system security by the security team. • Enhance any possible exploits may be used. |
| Financial Risk as the debts of the investors increased. | High | <ul style="list-style-type: none"> • We must modify the business plan to avoid the unexpected loss of money. • Regularly revie the budget and cash flow of the business. • Ensure to have emergency funds. |
| Reputation Risk as negative comments of the patents. | Medium | <ul style="list-style-type: none"> • Regularly monitor the feedbacks and reviews of patents. • Give the customers the enhancements they need as possible. |

FINANCIAL FORECASTS

KEY ASSUMPTIONS

Figure 5 illustrates our forecasting of cashflow in each month for the first year. For the cash-in in the first year of our company, we assumed that there will be a total of 7033 reservations, which is an average of 586 reservations per month. With an average reservation price of 250 EGP included our profit of 50 EGP, we calculated the total profit from cash receipts we receive from customers every month. We also assumed that we were already invested in securities, and we will be selling a percentage of them whenever needed to supply our cash income and will be issuing company stocks.

For the cash paid out, we assumed we will be reinvesting 5% of our cash receipts back into securities, deducted the wages that we have to pay to our employees, deducted the interest that we have to pay to our investor, and also paid the income taxes which is 10% of our cash-in of each month. We also assigned a fixed amount monthly for online advertisements.

In figure 6, alongside with assumptions made in year 1, we have forecasted that there will be an approximate increase of 20% in total number of reservations, increasing from 7,033 reservations to 8,572. In the cash paid out we increased our employees' wages.

Figure 7 represents the forecasting of the third year, alongside with assumptions made in year 1 and 2, we have forecasted that there will be an approximate increase of 33% in total number of reservations from that of year 2, increasing from 8,572 reservations to 11,402. In the cash paid out we increased our employees' wages.

FINANCING

STARTUP BUDGET

Assumptions

All the expenses are based on a year scale. The job listing fees is based on LinkedIn pricing system. Since the company is a tech company that provides a service and not a product, the company will not have inventory equipment and installation fees. Regarding the office, we will be operating from a rented house which will need furniture such as office desks, chairs, etc.

INCOME STATEMENTS

Figure 9 shows the income statement for the first year of operation on monthly basis. We had the advertising of first month significantly higher than other months due to the launch advertising made. The rent of the office we are operating in is paid every 6 months. For the mobile application to operate 24/7, we used a cloud service for our application as shown.

Figure 10 represents the overall income statements for the first 3 years of operation. As mentioned earlier, the first month of the first year had a high expense of advertising which is reflected in the annual income statement. In the 3rd year, we moved to another office due to the increased number of employees that we needed as we expanded our services.
